FIVE-DAY WEEK IS SEEN BY FORBES IN UNITED STATES

Wonderful New Industries of Tomorrow Will Generally Aid Unemployment

Writer Talks of Movies, Radio and Television; All of Recent Development

By R. C. FORBES

"God move in a mysterious way His wonders to perform..."

How could millions of people, especially those of meagre education, employ a much greater amount of leisure?

That is a question that has greatly troubled thoughtful minds interested in the human race.

In the answer even now appearing...

Consider all that is happening in the way of making life more interesting for individuals and families.

First came the telephone, a blessing in a thousand ways.

The spreading of the new century brought the automobile. Today there are in the United States enough cars to carry one-third the population at one time.

No need to stress what has done to annihilate isolation, to widen social intercourse, to relieve monotony, to enrich life, to give new strata of humanity.

The movies—retreat how intimate they have become into family life in this land.

The phonograph brought music to myriads of homes, brightening the atmosphere and otherwise enhancing the joy of living.

The radio! The imagination of now is Einstein could not grasp all that it means to humanity.

It would seem now to be the height of the craze, that it has brought nearly all that is most interesting in the world of science, literature, art, music, drama, history, geography, and general knowledge, into the home.

Now television is on the way. I stepped into a radio room in the American Telephone Company building in New York, and in the twinkling of an eye saw my wife in a building farther up the town.

Does it not begin to appear that it is possible for the great mass of the population in this country to occupy greater leisure interests, to be more interested in their lives, to be more interested in their homes, to be more interested in their families, to be more interested in their neighbors, to be more interested in their country, to be more interested in their world, to be more interested in their God?

It is to be envying credit of the men who organized the pool and those who have been successful in the industry, for the rights of the producers, that today there is a Canadian exchange of grain products.

JAPANESE SHIP HALIBUT HERE

By PERCI WHITTINGTON

TOKYO, March 24.—What may prove to be a new export line from Japan to Canada is being developed.

The Niichi-Ko (Japan-Russian) Fishery Company, a large Japanese concern, has been expected to open a line to Canada.

At present exports are handicapped by lack of proper handling facilities.

Increased shipments to Canada and the United States depend on whether the new method can be introduced.
