

the main ore body will be through in five years. Eldon E. Brown, general manager of Sherritt Gordon Mines Ltd., Sherridon, Man., told shareholders at the annual meeting here today.

Last year, he continued, a new copper-bearing structure was located three and one-half miles from the main structure and drilling showed one lens containing 1,250,000 tons, grading 1.5 per cent. copper, too low a grade to mine. Recent work has located a second lens of somewhat better grade ore.

Since the beginning of the year accounts payable have been reduced by \$97,000 through settlement with the British ministry of supply regarding the method of accounting, due to increased costs.

The company is installing a plant at a cost of \$125,000 for production of zinc concentrates, and it is expected the first shipment will be made June 9 next, shareholders here told.

Vegetable Prices Down

NEW WESTMINSTER. — Increasing abundance of fresh vegetables led to several price reductions in the market here this morning.

Baby chicks and ducklings made their appearance in large numbers. Sale of bedding and nursery stocks was heavy.

At Vancouver Fish Exchange this morning the halibut Annia A. sold 4000 chicken at 14.2 cents and 13,000 medium at 15 cents.

Japanese Fishing Boats Go On General Sale

On Monday the sale of Japanese fishing boats for any purpose to the general public will commence, according to A. E. McMaster, manager of the Japanese Fishing Vessel Disposal Committee.

"So far," said Mr. McMaster, "we have sold none of these vessels to any but bona fide fishermen. Our first object was to see that the industry would not suffer through withdrawal of the Japanese fishermen from the industry.

"We have released over 800 boats to white and Indian fishermen and feel the industry is now adequately protected. We have still on our hands approximately 400 boats, mostly gannet type, though there are some small packers, some good trollers and some cod and general type small craft."

Eggs and Produce

For shipping orders dealers usually charge one cent above the quoted wholesale prices to take care of the extra cost of packing for shipping.

To producer on farm.

Rectal Soreness and Pile Torture QUICKLY RELIEVED

If you are troubled with itching piles or rectal soreness, do not delay treatment and run the risk of letting this condition become chronic. Any itching or soreness of the rectum is a sign of anal or hemorrhoidal disease and proper treatment should be obtained at once.

Dr. J. C. Finkham's Vegetable Compound Tablets

Relieves Distress From Monthly FEMALE WEAKNESS

And Helps Build Up Red Blood!

Thousands upon thousands of women and girls who suffer from functional monthly disturbances—headache, backache, cramps, distress of "irregularities," nervous, tired, blue, weak feelings—have obtained most gratifying relief by taking Lydia E. Finkham's Vegetable Compound Tablets (with added iron).

Pinkham's Tablets not only relieve such distress, they also help build up resistance against it. They help build up red blood! Made in Canada.

NEW WESTMINSTER

Orders from Britain for 500 tons of processed strawberries from British Columbia are accepted here as an indication that the United Kingdom will continue to be an important factor this year in the province's export fruit sales.

In previous days the strawberry movement to the United Kingdom was in effect a disposal of surplus supplies, which presented a valuable outlet and price stabilizing factor for the industry.

The position has changed, with the ministry of food anxious to buy more than the province can actually produce, but willing also to pay a price which moves the barrelled SO2 berries from the surplus class.

T. Hesuess' conclusion of negotiations in regard to strawberries may be a forerunner of larger fruit pulp program for the United Kingdom on small fruits as well as tree fruits, pulped for jam manufacture.

The ministry has already enquired in regard to raspberries in SO2, black currant pulp, greengage pulp and peaches in SO2 solution. Last year, this movement, centralized through the department of trade and industry in co-operation with the special products board, totalled more than 3000 long tons net fruit of all varieties, with shipments extending from August to December.

The same centralized arrangements for space requirements, financing and details of shipping arrangements have been approved by Ottawa and by the United Kingdom authorities for the coming season.

headquarters, is to discourage the use of oil for heating or for any other purpose.

But arbitrary switch over before arrangements could be made for conversion or replacement of equipment would cause more dislocation than any saving in oil could possibly offset. For that reason the oil controller is following a policy of gradual transformation, as indicated by the June 1 order forbidding delivery of fuel oil to hotels, commercial buildings, etc., and the July 31 order applying to all industries using oil for heating. In connection with the latter order a few specific exemptions have been made in the case of plants using oil for power.

Domestic consumers of oil have been left for regulation and restriction to the last because of these factors:

1. Individually and in the aggregate, private homes' consumption of oil is comparatively negligible.
2. To switch over all private installations to some other fuel would place additional load on the delivery system at a time when conservation of rubber and gasoline is paramount.
3. Sudden demand for new equipment and conversion of oil furnaces or other fuel would create a difficult supply situation.

75 Carloads a Day Needed by Province

Installation of new oil burners for private homes was prohibited some time ago, and there is no doubt that continued operation of units already installed will be halted as soon as the oil controller's office feels that it can be done without serious disorganization.

The restrictions are due, of course, to the growing shortage of oil, due to priority of supply to the navy and merchant marine, the armed forces, railroads, and war industries, and as a result of tanker losses.

To supplement the deepsea facilities between the oil producing area in southern California and the consuming territory in the Pacific Northwest a considerable volume of oil is being brought north in tank cars, although very little has been shipped by rail into British Columbia owing to the excessive cost.

Orders from Britain for 500 tons of processed strawberries from British Columbia are accepted here as an indication that the United Kingdom will continue to be an important factor this year in the province's export fruit sales.

the ship most needing them are regarded as important factors in British ship program.

Increased standardization and fabrication of parts inland for assembly at coastal yards have helped, while salvage reached peaks hitherto unknown. For instance, a 12,000-ton tanker broke in two when mined. The fore part sank and the after part was towed into port. A new forward section, about 200 feet long, was then made and the parts joined. The tanker was rebuilt in two thirds the time required for a new ship and with a saving of 1500 tons of steel.

Japanese Avoided Prince Rupert Grain

The thrifty Japanese mind was an important factor in keeping grain shipments out of Prince Rupert from reaching the volume anticipated when a government grain elevator was built there. D. A. McGibbon, member of the Board of Grain Commissioners, told the House of Commons agriculture committee in Ottawa yesterday.

The committee was studying storage rates for grain in Canada and was informed the Prince Rupert elevator rate was 1-120th of a cent a bushel a day, compared with 1-45th of a cent at the head of the Lakes and 1-60th at Vancouver.

D. G. McKenzie, board chairman, said war developments had "frozen" grain stocks at Prince Rupert and Churchill, Man., and

George Weston Ltd., 20 cents, payable July 1 to shareholders of record June 12.
